

## MULTI ROOM AUDIO SYSTEMS.

The Hills Music System is a multi-room, multi-source audio distribution system. The system consists of a Music Hub which can accept up to four (4) line level stereo audio sources. Centrally located inside Hills Home Hub and up to eight (8) Music Room Managers which are specifically designed for home music applications.

The Music Room Manager has a built-in Infra Red (IR) receiver that accepts most common remote control signals and distributes the (IR signal back to the Music Hub allowing for remote control of one or more of the audio source devices. Each Music Room Manager can also accept one (1) additional Aux line level stereo audio source input, which is ideal for most portable music sources such as MP3 or CD players.

System status is easily identified with a clearly readable volume level, selected source LED's and backlit touch buttons. Users can access each music source and set volume level in each room by either switch plate or compact remote control.
